

Admin App

Admin app

- Django provides built-in apps which you can use in your project.
- During makemigrations, you have already created SQL statements for admin app
- During migrate, database for admin app is created.
- How to use admin app?
 - Localhost:8000/admin (Type this on browser, make sure your server is up)
 - Login window will appear.
 - Now you need login credentials to login as admin, but no user has been created so far.
 - Create a super user. On cmd, type following command
 - `Python manage.py createsuperuser`
 - Set password
 - Now you are able to login with newly created user.
-
